

What was done this week?

- Acquiring more knowledge and practice with python
- Started to create algorithm for wind pressure calculations

What issues/blockers/risks do you have?

- A lack of python experience
- Working with imaginary data

What are the future plans?

- Finishing the algorithm
- Working with simulated data (If by that time we don't get data from other teams)
- Try finding a suitable library for generating a rooftop model and then creating it

Current status - Yellowish
