

Project Mini-Report

October 21, 2022

What was done this week?

- The main focus was to finish and deliver the Technical Requirements.
- Finishing touches on XML conversion to JSON - have to extract needed data for each team then work on security part.
- Work was done on how to convert Figma design to Python.

What issues/risks/blockers do you have?

- Communication got worse - no weekly meetings.
- A lot of focus put to finish the delivery - code progress was slowed down.
- Teams working on the calculations and placements are slacking a lot more than Team 1 and Team 5.

What is the goal for the next week?

- Receive some code progress of Team 3 and Team 4.
- Continue to create visualisation for the app
- Optimize the code for importing the data and converting it, do some tests on that part.

Current status - Red
