

Project Mini-Report

October 14, 2022

What was done this week?

- Trying to deepen our knowledge with python and other needed assets like: xml, 2D drawing.
- Finding the alternative solution for app visualisation - not using Electron JS framework.

What issues/risks/blockers do you have?

- The whole project is moving in a very slow pace.
- Not a lot of progress done.
- There are still some confusion in how should some of the areas be executed, created.
- The next delivery is coming up, this can pause our progress even more

What is the goal for the next week?

- To have some kind of visualisation for the desktop app.
- To progress in coding, solving the problems of each area.
- Try to understand the next delivery and perhaps start writing that delivery.

Current status - Yellowish
