

MINI REPORT (area 1) 11-11

What was done this week?

Decided to make a package instead of API.

Updated Requirements specification.

Started to research how to implement security features.

What issues/risks/blockers do you have?

Right now, we could have issues with implementing security features to our package.

The package gets output in JSON format, but in the final version we could not add the coordinates. We hope that we will finish it until the next week.

Waiting for the lecturer to add more XML files of the roofs for testing.

What is the goal for next week?

The main goal for next week is to finish the extraction to JSON, so other teams could import our package and use it.

Also, we will try to implement security features.

What is the overall status - green, yellow, or red? Explain briefly in case of non-green status.

Right now, the overall status of our team project's flow is greenish.
