

Weekly report 3 (Team 1)

- What was done this week?

The goal of this week was to setup our working environment (Python 3.9 and above). Everyone on the team has started getting used to it, some started to learn Python from the basics, while some are deepening their knowledge.

Also, everyone setup VU VPN services on their devices, joined the VU MIF GitLab version control managing software. Moreover, we have several communication platforms with our team members, so we all can stay in touch and communicate at any given time.

Next up, our team has contributed to the process of making the draft of the requirements specifications for the whole project.

- What issues/risks/blockers do you have?

As of now, the biggest problem for some of our teammates is the insufficient knowledge in Python.

- What is the goal for next week?

The team leader will attempt to create the Jira project management software for the team, so we all can track our workflow, see what issues we have and so on.

Besides that, every team member will continue to develop their Python skills, to be able to write quality code.

- What is the overall status - green, yellow, or red? Explain briefly in case of non-green status.

Right now, overall status of our team project's flow is in between yellow and green. From my point of view, the thing that is keeping us from the green status is the lack of skill in Python.
