Project Mini-Report

October 21, 2022

What was done this week?

- Started to learn and get used to Bpypolyskel library, which will be used to generate 3D model of the roof.

- Basic XML conversion to JSON has been completed. Only some tinkering left to do.

- Basic visualisation of our desktop app was created.

What issues/risks/blockers do you have?

- Absent Project Leader, not much activity.

- Bpypolyskel library became a barrier to progress any further.

- Time management is not good - we focus on one thing at the time, we should manage to create the second delivery while also progressing on the code.

What is the goal for the next week?

- Learn UML diagrams.

- Start working on delivery 2 document.

- Try to progress further with areas 3 and 4.

Current status - Redish
