MINI REPORT (area 1) 10.15-10.21

What was done this week?

We finally started to code the program. Right now, our code is reading any kind of XML file and outputs the content to a JSON file.

Moreover, the API reads only XML files, on other file formats the code prompts an error.

Furthermore, we started to research how to make that the API would check if there were not any malicious scripts.

What issues/risks/blockers do you have?

The biggest issue is that our team members are ill. Two team members were absent last week. Right now, the team leader is ill.

What is the goal for next week?

The API should check if the provided data is correct, check for certain assets.

The API should read an XML file and extract certain data of the basic roof to a JSON file.

Start to write technical specification.

What is the overall status - green, yellow, or red? Explain briefly in case of non-green status.

Right now, the overall status of our team project's flow is green.
