Project

Mini-Report

2022-09-30

What was done this week?

- The primary focus of the teams was to write their requirements specification draft using some tips and tricks we gathered last Friday.
- We had a small poll to decide, which IDE all of the group will be using.
- Some of the group members were investing time to learn basics of our programming language and to understand their area much better.

What issues/blockers/risks do you have?

- We still don't have weekly meetings; we have meetings only when it's necessary.
- There is no draft for Team 2.

What are the future plans?

1. The main focus will still be finishing and polishing the drafts.
2. To make sure all the teams have basic understanding of Python.
3. To create a draft for Team 2.

Current Status - Yellowish
